

Agentic AI Learners' Space 2026

Week 4: Capstone Project: Build Your Own Multi-Agent System

You've spent three weeks learning how to prompt, retrieve, and act. This week, there's no assignment brief, you write your own.

Pick a problem you actually care about. Build a multi-agent system that solves it. Top 3 projects will get featured on the Analytics Club's Instagram page.

FORMAT:

This week is a contest, not a graded assignment.

- **Duration:** 1 week
- **Team size:** Solo
- **Deliverable:** Working multi-agent system
- **Certification:** Counts as your capstone project (compulsory for certification)

BRIEF:

1. **Pick your own problem statement.** Anything that genuinely needs multiple agents coordinating, not just a single agent with extra steps.
2. **Use what you've learned.** LangChain, LangGraph, MCP, and the orchestration patterns from this week's theory. Try combining it with RAG or fine-tuning from Week 2 if it strengthens the project.
3. **Multi-agent is non-negotiable.** At least 2 distinct agents with a clear division of responsibility, coordinated through one of the four orchestration patterns (Supervisor, Pipeline, Parallel+Aggregator, or Hierarchical).

SUBMISSION REQUIREMENTS: GitHub repository containing properly formatted and working code with clear and detailed README.md

Submission form: <https://forms.gle/sDhWzUASKMSLRcx97>

Deadline for submission: 7th July 2026

JUDGING CRITERIA:

Criteria	Weight
Problem originality & relevance	25%
Technical execution	30%
Orchestration design	25%
Clarity & presentation	20%

Top 3 projects will be selected and featured on the Analytics Club Instagram page, tagging the builders.

PASSING CRITERIA REMINDER:

According to the bootcamp structure: 2 of 3 assignments + 1 capstone project are required for certification. This capstone satisfies the capstone requirement regardless of contest placement. Everyone who submits a working project passes this component. The contest is the upside, not the bar.

Resources for the Agentic AI LS'26 are listed on the Notion page. You are encouraged to re-watch or re-read any of them as needed. Reach out on the Whatsapp group or the MS Teams channel for any doubt.

All the best!
